Eppendorf donates 20,000 euros to the EMBL to promote women working in science

- > **Support for “Advancement of Women in Science”**
- > **Christmas donation enables 20 women postdocs to join program for women scientists in managerial positions**
- > **Donation underscores long-standing corporate partnership between EMBL and Eppendorf**

Hamburg, November 22, 2021 – Today, Eppendorf SE donated 20,000 euros to the European Molecular Biology Laboratory (EMBL) during an online presentation ceremony. The funds are for the EMBL project “Advancement of Women in Science,” which enables women scientists to begin managerial careers in scientific fields.

In her remarks thanking the company for the donation, Edith Heard, the Director General of the EMBL, described the gift as an important signal for the qualification of women researchers. Heard said the managerial level in the scientific community was characterized by a clear gender-specific imbalance: “To offset this disparity, the EMBL took action in 2020 and initiated a program called ‘Leadership and Excellence for Aspiring Women Postdocs’ (LEAP) that includes a one-year mentoring and coaching program. This generous donation from Eppendorf will enable 20 additional female postdocs to gain the qualifications they need for managerial careers. We hope that they go on to become group leaders, leading researchers and assistant professors in scientific fields.”

Increased visibility for women in science

Inclusion and diversity are important issues at the Eppendorf Group, said Eva van Pelt, Co-CEO of Eppendorf SE: “Solidarity, tolerance and diversity are the defining features of the cosmopolitan culture that Eppendorf fosters and the foundation of the company’s success. The disparity between the number of men and women who hold managerial positions in the scientific community is a serious problem. Increasing the visibility of women in science is both a declared goal and an important concern at Eppendorf.”

EMBL and Eppendorf: long-time partnership

The EMBL and the Eppendorf Group share a joint history based on many years of collaboration in the area of corporate partnership programs. In addition, the presentation ceremony for the coveted Eppendorf Award for Young European Investigators has been held at the EMBL in Heidelberg for 10 years. The award is presented to recognize world-class performance in life science research by young scientists.

About Eppendorf

Eppendorf is a leading life science company that develops and sells instruments, consumables and services for liquid, sample and cell handling in laboratories worldwide. Its product range includes pipettes and automated pipetting systems, dispensers, centrifuges, mixers, spectrometers and DNA amplification equipment as well as ultra-low-temperature freezers, fermentors, bioreactors, CO₂ incubators, shakers and cell manipulation systems. Consumables such as pipette tips, test tubes, microtiter plates and single-use bioreactors complement the range of highest-quality premium products.

Eppendorf products are most broadly used in academic and commercial research laboratories, e.g., in companies from the pharmaceutical and biotechnological as well as the chemical and food industries. They are also used in laboratories that perform clinical or environmental analysis, in forensic laboratories and in industrial laboratories where process analysis, production and quality assurance are performed.

Eppendorf was founded in Hamburg, Germany in 1945 and currently has more than 4,500 employees worldwide. The company has subsidiaries in 28 countries and is represented in all its other important markets by distributors.
